Talking tree, Application

It's a new idea and application to get information about trees. Most people know the plants by their local names. Some people know their commercial and therapeutic uses. People are unaware of the “Talking Tree App Tag” which is stuck on the tree. The first step is to make them curious about the QR Code printed on the tag on the tree.

Our college always followed the path of the green campus. We planned to give information about campus plants to the students. Then, we tag the nameplates on most of the plants in the campus. Thereafter, we came across this talking tree application, then, we inaugurated the talking tree application in the presence of the App developer, Dr. Sarang Dhote sir, and all staff members of the college.

This application is easy to apply, and can simply be downloaded from the google play store, as, “Talking Tree KM, Chandrapur”, App in 4G smartphone, after installing the app, the QR Code tag on to the plant is scanned, then, automatically all the information will be displayed in written and vocal form in a smart phone.

In this way, awareness about the trees among students is being implemented in college.
